

Daily Market Report

Friday, June 12, 2026 — After Market Close | Singapore

SECTION 1 — Market Summary

Index	Closing Price	Day	1 Week	1 Month	1 Year	52W High	52W Low
S&P 500 (SPY)	737.76	+1.70%	-2.55%	-0.06%	+24.47%	759.57	592.71
Nasdaq 100 (QQQ)	717.12	+3.38%	-3.17%	+1.40%	+37.06%	746.16	523.21
VIX	22.22	+11.83%	+38.36%	+23.51%	+21.02%	31.05	13.47

U.S. equities closed Friday June 12 with a broad-based rally — SPY (+1.7%) and the Nasdaq 100 (NDX) surged +3.38% — as the long-anticipated SpaceX (SPCX) IPO landed, cooling geopolitical fears after President Trump signalled a potential Iran deal framework, and semiconductor stocks MU (+11.66%) and AMD (+7.97%) led a powerful tech recovery. Despite today's sharp rebound, the Nasdaq 100 (NDX) remains -3.17% over the trailing week and -4.6% off its 52-week high of \$746.16, keeping the overall near-term trend in a cautious recovery mode rather than a full breakout.

SECTION 1B — Early Warning

Signal	Status	What It Means
VIX (fear gauge)	AMBER	22.2 — rising stress
Breadth (sectors up)	GREEN	8/11 sectors green — broad
S&P vs 50-day avg	GREEN	+2.3% vs trend
Consumer confidence	GREY	N/A — set manually in config
10Y Treasury yield	AMBER	4.55%

Overall: CAUTION

SECTION 2 — Stock Spotlights

Micron Technology (MU)

Metric	Value
Closing Price	995.87
Day Change	+11.66%
52W High	1079.57
52W Low	98.18
P/E Ratio	46.9
Dividend Yield	6.0%
Analyst View	strong_buy
Analyst Target	\$838.62 consensus / \$1,123.33 most-recent 3-analyst avg (Benzinga/Wolfe+GS+WF, June 2026)
Next Earnings	Jun 24, 2026
Beta (1Y)	2.92

HOLD — MU closed at \$995.87 — well above the Benzinga consensus of \$838.62 (30 analysts, June 2026) and above the most recent 3-analyst average of \$1,123.33 from Wolfe Research, Goldman Sachs and Wells Fargo, suggesting the stock is broadly fairly valued at current levels. One-year momentum is extraordinary at +914%, and MU is riding a confirmed AI memory supercycle with HBM supply entirely sold out, Q2 revenue of \$23.9B (+196% YoY), and guided Q3 record revenue of ~\$33.5B; the bull case is well-supported fundamentally. Key risk is the stock's extreme beta of 2.92 and the upcoming Q3 earnings on Jun 24 (after close), which carries a priced-in move of ±17%, meaning a guidance miss or macro shock could erase 15-20% rapidly.

SECTION 3 — Watchlist

Ticker	Company	Price	Day	1 Week	1 Month	1 Year	52W Low	52W High	Beta
--------	---------	-------	-----	--------	---------	--------	---------	----------	------

SPCX	SpaceX	22.37	+0.22%	-0.07%	+1.34%	-12.94%	21.71	26.59	0.01
NVDA	Nvidia	204.87	+2.22%	-6.31%	-7.21%	+49.13%	137.38	235.74	1.83
AMD	AMD	488.45	+7.97%	-6.64%	+8.96%	+326.11%	114.63	542.52	2.84
AVGO	Broadcom	385.57	+3.62%	-7.96%	-8.04%	+55.03%	244.28	481.57	2.1
GOOGL	Alphabet	357.77	+0.39%	-3.87%	-7.64%	+111.66%	165.19	402.62	1.29
IBM	IBM	274.85	+0.91%	-8.92%	+25.38%	+4.15%	214.64	329.23	1.09
MSFT	Microsoft	390.34	-1.77%	-8.81%	-4.27%	-15.51%	356.77	542.07	0.84
INTC	Intel	116.96	+9.27%	+4.63%	-3.03%	+492.50%	19.31	129.44	2.52
C	Citigroup	138.07	+3.52%	+2.16%	+9.20%	+82.15%	75.8	138.07	1.42
QRVO	Qorvo	97.66	+2.80%	-6.07%	+8.84%	+27.88%	76.02	108.23	1.21
ANET	Arista Networks	156.4	+3.06%	-5.79%	+9.72%	+74.20%	86.25	177.73	2.07
WQTM	Quantum ETF (WQTM)	36.63	+4.27%	-6.94%	+4.93%	+20.93%	23.32	41.31	2.39
GFS	GlobalFoundries	80.74	+7.91%	-4.68%	+11.91%	+124.78%	31.62	89.96	2.03

SECTION 4 — Why Markets Moved

WHAT HAPPENED: The S&P 500 (SPY) surged +1.7% to close at \$737.76 and the Nasdaq 100 (QQQ/NDX) jumped +3.38% to \$717.12 on Friday June 12, led by a powerful semiconductor rally: MU +11.66%, AMD +7.97%, Intel +9.27%, GlobalFoundries +7.91%, and Quantum ETF (WQTM) +4.27%. The SpaceX IPO (SPCX) formally opened trading today at \$22.37, in what retail investors had been told was the largest public offering in history, attracting over \$100 billion in subscriptions. Technology was the top sector (+3.73%), followed by Materials (+3.27%) and Industrials (+3.24%), while Energy (-1.94%) and Consumer Staples (-0.26%) lagged.

WHY IT HAPPENED: Three forces converged. First, President Trump cancelled planned Iran strikes Thursday evening, signalling a potential deal 'agreed in principle,' which caused crude oil to pull back and unleashed risk appetite. Second, BofA upgraded Intel on soaring CPU order data, triggering a broader chip stock squeeze that had been oversold after the -4% Nasdaq rout on June 4. Third, the SpaceX IPO debut acted as a confidence catalyst, drawing institutional and retail

capital into the AI-adjacent tech complex and validating the 2026 IPO cycle for AI infrastructure. The week's earlier pain — triggered by hot CPI (fastest pace since May 2023) and PPI (fastest since late 2022) prints — was largely priced in, and the Iran de-escalation signal was enough to flip positioning.

WHAT IT MEANS FOR INVESTORS: Today's broad rally with 8 of 11 sectors green is technically healthy — breadth signals are GREEN and SPY is +2.3% above its 50-day average — but the AMBER VIX at 22.2 (up +11.83% today, +38% in a week) and a 10-year Treasury yield at 4.55% warn that the rally remains fragile. Market expectations now price in two Fed rate hikes over the next 12 months given sticky inflation, which is a headwind for high-multiple tech. Singapore-based investors should also factor in the USD/SGD impact: a stronger-for-longer US dollar, driven by hawkish Fed repricing, could partially offset USD equity gains when repatriated.

SECTION 5 — Sector Rotation & Macro

Winners

- Technology: **+3.73%**
- Materials: **+3.27%**
- Industrials: **+3.24%**

Losers

- Consumer Staples: **-0.26%**
- Energy: **-1.94%**

Macro

- INFLATION RUNNING HOT — FED HIKE RISK RETURNING: May PPI came in at +1.1% month-on-month (headline) and +6.5% annually — the fastest pace since late 2022 — beating the 0.7% consensus and reinforcing the May CPI print (fastest since May 2023). Market pricing now implies two 0.25% Fed rate hikes by December 2026 (per Edward Jones/CME FedWatch data), a dramatic reversal from rate-cut expectations in early 2026. The June 16-17 FOMC meeting (Chair Kevin Warsh's first) is the next critical event — any hawkish tone or dot-plot revision higher could reignite bond selling.
- MIDDLE EAST CEASEFIRE — FRAGILE, NOT CONFIRMED: President Trump signalled a deal 'agreed in principle' with Middle East allies on Thursday, causing crude to pull back. However, the Strait of Hormuz dual blockade remains partially in place, U.S.-Iran tensions are acute following helicopter downings and mutual strikes, and gasoline prices — despite Friday's relief — are still ~37% higher year-on-year. Any re-escalation is an immediate inflation and risk-off trigger. Fidelity's mid-year outlook notes the Iran conflict remains the #1 downside risk to equities.

- SPACEX IPO + MEGA-IPO CYCLE RESHAPING CAPITAL FLOWS: SpaceX (SPCX) began trading today, with \$100B+ in retail subscriptions for what is described as the largest IPO in history. OpenAI and Anthropic are expected to list later in 2026. U.S. Bank Asset Management warns these mega-IPOs could compete for investor capital, potentially triggering rotational selling in existing Nasdaq-listed AI stocks to fund new purchases. NDX's quarterly rebalance on June 22 — adding ALAB, CRWV, NBIS, RKL B, TER and removing CHTR, CTS H, INSM, VRSK, ZS — adds structural index flow complexity in the near term.

SECTION 6 — Earnings Calendar

Watchlist stocks verified. Broader NDX dates sourced via web search — confirm before trading.

Company	Ticker	Next Earnings	
Micron Technology	MU	Jun 24, 2026	WATCHLIST
Broadcom (Q3 FY2026 guidance window)	AVGO	Jun 22, 2026	
CarMax	KMX	Jun 17, 2026	
Accenture	ACN	Jun 18, 2026	
Arista Networks	ANET	Aug 03, 2026	
Alphabet	GOOGL	Jul 22, 2026	
Microsoft	MSFT	Jul 22, 2026	
Nvidia (reported)	NVDA	May 20, 2026	
Citigroup (Q2 2026 est.)	C	Jul 15, 2026	
IBM (Q2 2026 est.)	IBM	Jul 22, 2026	
AMD (Q2 2026 est.)	AMD	Jul 28, 2026	
Intel (Q2 2026 est.)	INTC	Jul 24, 2026	

SECTION 6B — Opportunity Radar

- **AI Memory Supercycle — Pre-Earnings Run** — Micron's Q3 guidance calls for \$33.5B in revenue with ~81% gross margins, and its entire 2026 HBM supply is sold out under finalized contracts. With earnings on June 24 and a $\pm 17\%$ priced move, the setup into a potential beat is compelling — the S&P Global consensus 'Strong Buy' (44 analysts) with a \$811 avg target vs current \$996 price shows expectations are catching up. MU's 1-year return of +914% signals the cycle is mature but supply-demand dynamics in AI memory remain structurally tight. (e.g. MU)
- **NDX Quarterly Rebalance — New Entrant Front-Running** — The NDX quarterly rebalance takes effect June 22, 2026, adding Astera Labs (ALAB), CoreWeave (CRWV), Nebius Group (NBIS), Rocket Lab (RKLB), and Teradyne (TER). Index-tracking ETFs must buy these names before the open, creating mechanical buying pressure. Rocket Lab has seen fresh analyst upgrades in June 2026 after its Neutron development update pulled forward the launch timeline, with one initiation at Buy citing a strong second-mover position in medium-lift launch behind SpaceX. (e.g. RKLB)
- **Sector Rotation Into Financials — Rate Hike Repricing Tailwind** — With market pricing now implying two Fed rate hikes over the next 12 months (per Bloomberg/Edward Jones data), bank net interest margins should expand. Citigroup (C) hit a fresh 52-week HIGH today at \$138.07 (+3.52%), up +82% year-on-year, reflecting this repricing. Schwab sector analysis (May 2026) notes Industrials and Materials are being supported by AI infrastructure buildout capex, while Financials benefit from rising rate expectations — the 10Y yield at 4.55% directly improves bank earnings power. (e.g. C)

Today's rally is encouraging — broad sector participation (8/11 green), SPY above its 50-day average, and a semiconductor re-ignition driven by Intel's BofA upgrade and the SpaceX IPO catalyst — but the risk environment remains CAUTION-amber. The VIX at 22.2 spiked +11.83% intraday as the SpaceX debut generated volatility, the 10Y yield at 4.55% is competitive with equity risk premiums, and sticky inflation (PPI +6.5% YoY) means the Fed is more likely to hike than cut in H2 2026. For retail investors in Singapore, the actionable posture is: hold core AI/semiconductor positions (NVDA, AMD, MU) through the Micron June 24 earnings catalyst, but trim any single-stock positions that have exceeded 10% of portfolio weight; initiate or add to defensive diversifiers including short-duration Treasuries (yielding 4-4.5%), dividend-paying blue chips, and a modest energy hedge given the unresolved Iran situation. Avoid chasing the SPCX IPO pop — the stock is near its 52-week low, beta is near zero, and 1-year return is -12.94%, suggesting the IPO excitement is already reflected in today's broader tech rally. Reduce overweight positions in MSFT (down -15.51% 1-year, negative trend) and AVGO (down -8% 1-month) until clearer earnings catalysts emerge.

SECTION 7 — Stocks to Watch

AMD | Price: \$488.45 | **BUY** | Horizon: 5-YEAR

AMD has delivered +326% in 1-year and surged +7.97% today on the Intel upgrade/semiconductor re-rating wave, confirming strong institutional conviction in the AI accelerator cycle where AMD's MI-series GPUs are gaining hyperscaler

design wins as an alternative to NVDA. At \$488.45 — still 10% below its 52-week high of \$542.52 — and with a 1-month gain of +8.96%, AMD offers a structurally compelling 5-year AI computing play for investors with high risk tolerance (beta 2.84); size positions prudently and use any pullback toward \$450 as an accumulation opportunity.

C | Price: \$138.07 | **HOLD** | Horizon: 1-YEAR

Citigroup hit a fresh 52-week HIGH of \$138.07 today (+3.52%), having gained +82.15% over 1 year — the stock is a direct beneficiary of rising-rate repricing as Fed hike expectations return, with net interest margin expansion supporting consensus earnings upgrades. Hold for income and rate-cycle exposure through Q2 2026 earnings (est. July 15), but do not add aggressively at the 52-week high; wait for a pullback to the \$125-\$130 range for fresh entry.

MSFT | Price: \$390.34 | **SELL** | Horizon: EXIT NOW

Microsoft is the weakest mega-cap in the NDX universe — down -15.51% over 1 year, down -8.81% over 1 week, and -4.27% over 1 month — while trading at \$390.34, still a full 28% below its 52-week high of \$542.07 with no clear near-term catalyst to close that gap. Today's -1.77% decline while every other major tech name rallied is a clear relative-strength warning; with the stock below analyst consensus implied levels, a negative earnings revision cycle underway, and the market rotating away from software/cloud toward semiconductor hardware and AI infrastructure, this is the EXIT position.

MU | Price: \$995.87 | **HOLD** | Horizon: 1-YEAR

Micron surged +11.66% today to \$995.87 and reports Q3 FY2026 earnings on June 24 (after close) with consensus expecting ~\$33.5B revenue and ~81% gross margins — a potential beat given the AI memory demand supercycle. However, at current levels MU trades above the broad 30-analyst consensus of \$838.62 and the implied $\pm 17\%$ earnings move means a hold rather than aggressive buy ahead of the print; the risk/reward is balanced, and investors already long should trim 10-15% into strength to reduce beta-2.92 exposure.

ALAB | Price: \$Current price not in verified data layer — check live quote before trading; ALAB is not in our stw_candidates list. | **BUY** | Horizon: 5-YEAR

Astera Labs will be added to the NDX on June 22, 2026 as part of the quarterly rebalance — creating mechanical index-fund buying pressure in the near term — and the company is a pure-play AI data centre connectivity chip designer benefiting from the same structural HBM/AI infrastructure build-out driving MU and NVDA; the NDX inclusion is a valuation and liquidity step-change that has historically preceded 15-30% re-ratings in newly included mid-cap tech names.

SECTION 8 — Market Trends

Today's +3.38% NDX surge — with MU, AMD, Intel and GlobalFoundries all posting double-digit intraday moves — signals that the week's semiconductor sell-off was driven by geopolitical fear and thin liquidity rather than fundamental deterioration, and the sharp rebound with broad sector participation (8/11 green) suggests institutional buyers are using dips as accumulation opportunities. However, the VIX spiked +11.83% on SpaceX IPO day itself, and the 1-week VIX gain of +38.36% reflects genuine macro uncertainty: the 10Y yield at 4.55%, two expected Fed hikes priced in for 2026, and an Iran situation that is 'agreed in principle' but not structurally resolved. The near-term directional signal is cautiously bullish — the S&P is +2.3% above its 50-day average — but the market remains headline-sensitive and any re-escalation of US-Iran conflict or a hawkish Warsh FOMC statement on June 17 could quickly reverse this week's gains.

Upside Risks

- Iran peace deal materialises: A formal ceasefire would cause crude oil to drop sharply (Brent currently ~\$86.70), easing core inflation and reopening the door to Fed cuts — the VIX could fall back below 18, unlocking another 5-8% NDX rally.
- Micron Q3 earnings beat on June 24: MU guided \$33.5B revenue at ~81% gross margins; if actual results exceed guidance (as in Q2, when revenue beat estimates by 22% and EPS beat by 36%), the stock could surge 15-20% and lift the entire semiconductor complex, pulling NDX higher.
- NDX rebalance inflows June 22: Five new additions (ALAB, CRWV, NBIS, RKL, TER) require mandatory index-fund buying before the June 22 open, adding mechanical upward price pressure on these names and potentially supporting overall NDX volume/sentiment.

Downside Risks

- FOMC hawkish surprise June 17: If Chair Warsh signals rate hikes are on the table — consistent with annual PPI of +6.5% and CME data pricing 70% odds of at least one hike by December 2026 — the 10Y yield could spike above 4.7%, compressing high-multiple tech valuations and pushing QQQ back toward the \$690 level.
- Iran conflict re-escalation: The Strait of Hormuz dual blockade remains partially in place; any resumption of US strikes or Iranian retaliation would spike crude back above \$90/barrel, reignite CPI, and trigger a risk-off VIX surge — Goldman Sachs' Risk Appetite Indicator is already at the 99th percentile, meaning positioning is stretched and a sentiment reversal would be violent.
- SpaceX IPO capital rotation: With over \$100B in retail subscriptions for SPCX, there is a documented risk (per U.S. Bank Asset Management) that investors liquidate existing NDX/AI holdings to fund IPO allocations, creating near-term selling pressure on NVDA, MSFT, GOOGL, and other mega-cap tech anchors that dominate NDX weighting.

SECTION 9 — Portfolio Allocation (5-8 Year Horizon)

With VIX AMBER at 22.2 (rising stress), 10Y Treasuries at 4.55% (AMBER), and Fed hike expectations re-pricing higher due to sticky PPI/CPI, a retirement-horizon investor 5-8 years from retirement should tilt allocation toward a growth-with-capital-preservation blend — maintaining meaningful equity upside via AI/tech and dividend blue chips while building a defensive buffer in short-duration bonds and cash equivalents that now offer 4-4.5% risk-free yields, reducing sequence-of-returns risk as retirement approaches.

Bucket	Allocation %	Purpose
Core US Equity Growth (NDX/SPY ETF)	30%	Capture long-term US large-cap and tech/AI structural growth; use broad index ETFs (QQQ, SPY) to avoid single-stock concentration risk; this bucket drives the portfolio's capital growth engine over the 5-8 year horizon
AI & Semiconductor Thematic (individual stocks)	15%	Concentrated upside in the structural AI capex cycle via AMD, MU, NVDA, ANET — cap any single name at 4% of total portfolio; accept high beta (2-3x) in exchange for alpha; review after each earnings season
Dividend & Defensive Equity (blue chips, financials)	15%	Income generation and lower-volatility equity exposure via dividend blue chips (Citigroup, Alphabet, IBM), benefiting from rate repricing without full beta exposure; targets 2-4% dividend yield to supplement portfolio income
Short-Duration Bonds & T-Bills (0-3 year maturities)	20%	Capital preservation and income at 4-4.5% risk-free yields; avoid long-duration bonds (20-30Y) given rate hike risk; ladder T-bills and 2-year Treasuries to lock in yield while keeping duration risk low; this is the primary capital preservation bucket
TIPS / Inflation-Protected Securities	8%	Direct hedge against the #1 macro risk: sticky inflation driven by Iran energy supply disruption and AI capex spillover; TIPS adjust principal with CPI, protecting real purchasing power over the 5-8 year horizon
Real Assets & Commodities (energy/gold ETF)	7%	Portfolio hedge against prolonged Iran conflict and oil supply shocks that could keep energy prices elevated; a small allocation to a diversified energy/commodities ETF or gold fund provides uncorrelated returns and inflation protection without the volatility of single energy stocks
Cash & Money Market (SGD/USD)	5%	Liquidity buffer for opportunistic deployment on market dislocations (e.g., a VIX spike above 28, or a >7% single-day NDX correction); also provides 1-2 years of living expense cover to eliminate the need to sell equities during a downturn — critical for managing sequence-of-returns risk as retirement approaches

Rebalance Trigger: Rebalance immediately if ANY of the following occur: (1) VIX closes above 28 for two consecutive days — reduce AI/thematic equity by 5% and add to short-duration bonds; (2) 10Y Treasury yield rises above 5.0% — trim equity growth bucket by 5% and extend TIPS allocation; (3) SPY falls more than 10% from current \$737.76 level (i.e., below \$664)

— activate the cash buffer to rebalance back to target weights by buying the dip in Core US Equity; (4) Any single thematic stock position exceeds 6% of total portfolio value — trim to 4%.
